

Rock Fall Tomcat Metatarsal Protection Range

Rock Fall UK Limited proudly presents the next generation of metatarsal protective footwear with its Tomcat range of "Total Protection" safety boots, the very first to feature a patented internal metatarsal guard that exceeds EN ISO 20345:2004/A1 2007 European safety standards.

The new 'industry standard' in metatarsal protection comes in three styles, all constructed with tough, full-grain leather and feature Rock Fall's new 'Active Step' deluxe comfort footbed. Being water resistant (Rhyolite TC3000A fully waterproof), all boots boast outsoles resistant to temperatures up to 300 degrees centigrade, with the Grit TC1000A also incorporating a Goodyear Welted outsole.

Conceived by Stephen Noon, Rock Fall's managing director, Rock Fall set out to protect more than the traditional toecap protective boot. Rock Fall feel that the whole of the wearer's foot should be protected with a light, flexible and fashionable boot.

Developed over a two year period, Rock Fall has taken every care to patent and register design elements of the new range.

To read specifications for each boot, please select from the right-hand column.

We are also very pleased to announce that we have several extensions to the range due in the near future, which include a dedicated female boot and a 100% metal-free boot for electrical and security environments due this September.
